

Add Bootstrap in Angular

By Dnyanesh Sir

Contact us +91 9096652214

Add bootstrap using npm

```
npm install bootstrap --save
```

```
npm install jquery --save
```

```
npm install popper.js --save
```

```
Add reference in angular.json
```

Open the angular.json file and add below path :

```
"styles": [  
    "node_modules/bootstrap/dist/css/bootstrap.min.css",  
    "src/styles.css"  
],  
"scripts": [  
    "node_modules/jquery/dist/jquery.min.js",  
    "node_modules/bootstrap/dist/js/bootstrap.min.js"  
]
```

Use Bootstrap in Your Angular Components:

Now you can use Bootstrap classes in your Angular templates. For example, you can update `src/app/app.component.html` to include some Bootstrap components.

```
<div class="container">
  <div class="row">
    <div class="col-md-12">
      <h1 class="display-4">Welcome to My Angular App</h1>
      <p class="lead">This is a simple hero unit, a simple jumbotron-style component for
calling extra attention to featured content or information.</p>
      <hr class="my-4">
      <p>It uses utility classes for typography and spacing to space content out within
the larger container.</p>
      <a class="btn btn-primary btn-lg" href="#" role="button">Learn more</a>
    </div>
  </div>
</div>
```

Thank you
